OBJECTIVE

Sending an application for a job position where I can improve my abilities as a front-end developer and also my skills will be used. I will be happy that we can reach better places together and show you my skills.

SKILLS	DESCRIPTION
HTML5	❖ Excellent knowledge of HTML5 markup language
CSS3	❖ Ability to work with raw CSS3 and implement responsive designs
Java Script	❖ Sufficient mastery of array of object topics and the ability to work with raw JavaScript, ❖ DOM, BOM, OOP, Array-of-Object, Methods, Functions, Modular structure

React.js(juni	❖ Good familiarity with the popular React library and the ability to work with the capabilities of this library and its common packages
	❖ Functional Components, Class Components, Props, States, Hooks, HOC, SPA, Optimization
	❖ React Router, Redux, Axios, Formik, React Select,
Tailwind.css	❖ The ability to work with tailwind well and optimally
Sass	❖ I'm familiar with it, but I haven't done a big project with Sass yet, but I'm still learning this skill
Git	❖ Certainly, the most important requirement for participating in group work is to master a content management program. Excellent

PORTFOLIO

- Tapsy demo

  o The implementation of this project is done with HTML, CSS, JS. In this project, I was able to increase my skills in these matters to a great extent. This project is responsive. You can see the online link of the project in this aaa. The project codes are available at GGG.

- Todo list Js

  o The development of this project has been done using html, css, js. This project is one of the first projects that I have done. You can see the online link of the project in this [link](#). The project codes are available at [Github](#).

- Todo list React

  o This project is the same as the tlodo list project, but it is developed with React.js. It is more efficient and more efficient than the JS project. In this program, you can manage your daily tasks.You can see the online link of the project in this [link](#). The project codes are available at [Github.](#)

- Shopping js

  o Of course, most websites need a store section and a shopping cart. In this program you can add products to the shopping cart and it is a store program. This project is developed with the help of raw JavaScript and with the help of classes and object-oriented discussion.You can see the online link of the project in this [link](#). The project codes are available at [Github.](#)

- Portfolio App

  o My personal website was developed with the help of React.js, which is fully responsive. All my information is available on this website.You can see the online link of the project in this [link](#). The project codes are available at [Github.](#)

Conclusion

o You can also visit my Github account to see other programs. Projects such as Expense App, Restaurant Website, Filter Product and.... several other programs are in the development stage.The are Git hub link is [Github.](#)

About ME 🙂

If you have come this far, you can get a little more information about me. I am 20 years old and live in Sardasht city, West Azerbaijan Province, Iran. My mother tongue is Kurdish and I have a complete command of Persian. I have a partial command of English. I am very interested in movies HOLLYWOOD. Something that really makes me feel better is coding and learning a new skill so that I can move forward better.
